Berkeley Varitronics Systems, Inc. (BVS) is a 48 year old, privately held engineering company that specializes in RF design solutions for wireless threat detection, security audits and cybersecurity solutions for military, law enforcement and secure government facilities. BVS security products are all designed and manufactured at their Metuchen, New Jersey USA headquarters and used worldwide.

## SentryHound-Pro™

### Ferrous Contraband Detector

Dual pole (also works as a single pole) portal solution detects unauthorized cell phones, tablets, laptops, smartwatches and wearables that are powered on or off. SentryHound-Pro's ferromagnetic sensors (4 distinct zones from head to toe) detect trace amounts of ferrous material found in all wireless electronic devices but are also less prone to false detections that plague conventional metal detectors. For active RF detection from a distance, utilize WallHound-Pro™ and Yorkie-Pro™ for secure your perimeter inside and out.

#### Pro Tips:

- Add 2nd pole for 2x detection distance
- Internal battery lasts 24 hours
- Dry contacts support external alerts

## WallHound-Pro™

### Wireless Detection & Deterrent

Detect and deter visitors and staff from using any cellular, Wi-Fi, Bluetooth or BLE devices in secure areas. WallHound-Pro™ detects all nearby wireless activity and alerts security personnel with color-coded and audible voice alerts which also serve as deterrents to visitors and staff. The unit is completely self-contained, scans 24-7 and requires no PC or direct operation by anyone. All wireless signals are detected, sorted and timestamped for users to subsequently locate using Yorkie-Pro™ and then white list once identified as a known device.

#### Pro Tips:

- Mounts to any wall or optional stanchion
- Physical lock & key and PIN code prevent any tampering
- Directional antennas perfect for hallways and specific areas

## Yorkie-Pro™

### Handheld Wireless Intrusion Detector

This handheld receiver is designed for wireless security audits of data-sensitive government, law enforcement and military facilities. Yorkie-Pro™ sweeps all nearby Cellular, Wi-Fi, Bluetooth and BLE (Bluetooth Low Energy) channels using a high-speed RF engine in conjunction with a Wi-Fi/BT/BLE demodulator. Scan lists are sorted by signal strength, SSID, MAC address, channel number. Optional direction finding antenna support and touchscreen allow users to pinpoint and locate suspicious devices.

#### Pro Tips:

- Internal GPS allows geo-location of all recorded measurements
- Custom thresholds, frequency & time domain measurements for RF surveys
- Full data logging & data snapshots for further analysis
